SAMPLE: made up for testing, not real homework

Name: _____ Date: _____ Period: ____

Life Science, Unit 1: Characteristics of Living Things

Homework 1.2

Part A. Scientists use five characteristics to decide whether something is alive. List all five.

1. _____
2. _____
3. _____
4. _____
5. _____

Part B. Match each example to the characteristic it shows. Write the letter.

___ 1. A sunflower turns to face the sun during the day.

___ 2. A tadpole changes into a frog.

___ 3. A bacterium splits into two new bacteria.

___ 4. A squirrel eats acorns to get the energy it needs.

___ 5. An onion skin under a microscope shows many small, box-shaped units.

A. Made of cells (organization)	B. Reproduction	C. Growth and development
D. Response to the environment	E. Uses energy	

Part C. Short answer. Use complete sentences.

6. What is a cell, and why is it called the basic unit of life?

7. Explain the difference between sexual and asexual reproduction.

8. A crystal can grow bigger over time. Is a crystal alive? Explain using at least two characteristics of living things.

9. A fire uses energy, grows, and can spread ("reproduce"). Why do scientists still say fire is not alive?

10. Give one example of how YOU respond to your environment. Name the stimulus and the response.
